

🚀 Task Doy - Flask Todo App

A sleek, responsive To-Do List application built with Python and Flask. This project allows users to manage daily tasks with a modern interface, featuring task editing, completion toggles, and an **Undo** safety net.

🔗 Live Demo

Check out the live application here:

[\[\[https://todotask-p0f5.onrender.com\]\]](https://todotask-p0f5.onrender.com)(<https://todotask-p0f5.onrender.com>)(<https://todotask-1qep.onrender.com>))(<https://todotask-1qep.onrender.com/>)

✨ Features

- * **Create & Delete:** Easily add new tasks or remove finished ones.
- * **Undo Action:** Accidentally deleted a task? Bring it back instantly with the Undo notification.
- * **Edit Mode:** Update task titles without deleting them.
- * **Responsive Design:** Optimized for both desktop and mobile viewing.
- * **Persistent Storage:** Uses SQLite with SQLAlchemy to keep your tasks saved.

🛠️ Tech Stack

- * **Backend:** Python / Flask
- * **Database:** SQLAlchemy / SQLite
- * **Frontend:** HTML5, CSS3 (Custom Animations), Bootstrap Icons
- * **Deployment:** Render.com

⚙️ Local Setup

If you want to run this project locally:

1. **Clone the repo:**

```
``bash
git clone
```
